Abstract: PURPOSE: To improve sharpness and graininess by providing photosensitive silver halide emulsion layers adjacently to a black colloid silver-contg. layer and incorporating a specific compd. into at least one layer of the photograph constituting layers.

CONSTITUTION: Any of the photosensitive silver halide emulsion layers is provided adjacently to the black colloid silver-contg. layer of the silver halide photographic sensitive material having the photograph constituting layers including the red-photosensitive silver halide emulsion layer, the green-photosensitive silver halide emulsion layer and the blue-photosensitive silver halide emulsion layer as well as the black colloid silver-contg. layer on a base and the compd. which scavenges the oxide of a developing agent by reacting with the oxidation product of the developing agent or releases the precursor thereof is incorporated into at least one layer of the photograph constituting layers. The silver halide color photographic sensitive material having the excellent sharpness, graininess, etc., is obtd. in this way.
